Hazardous Weather

Hazardous Weather

Rain showers and thunderstorms will be possible across the Caprock and Rolling Plains this afternoon and evening. Thunderstorms may be severe across the eastern Rolling Plains, with the main hazards being large hail up to two inches in diameter and damaging winds up to 60 mph.

While showers and storms will be possible across the entire Panhandle today, the far east will have just enough instability to pose a possible severe threat, with hail around 1" in diameter as the main hazard.

Hazardous Weather

Rain showers and thunderstorms will be possible across the Caprock and Rolling Plains this afternoon and evening. Some storms in the eastern Rolling Plains may be severe, capable of producing of large hail up to two inches in diameter and damaging winds to 60 mph.

Several rounds of thunderstorms are expected through early Thursday. Another round of heavy rainfall is expected tonight into early Thursday. Flooding of low-lying and poor drainage areas, along with flooding of main-stem rivers, are possible.

Hazardous Weather

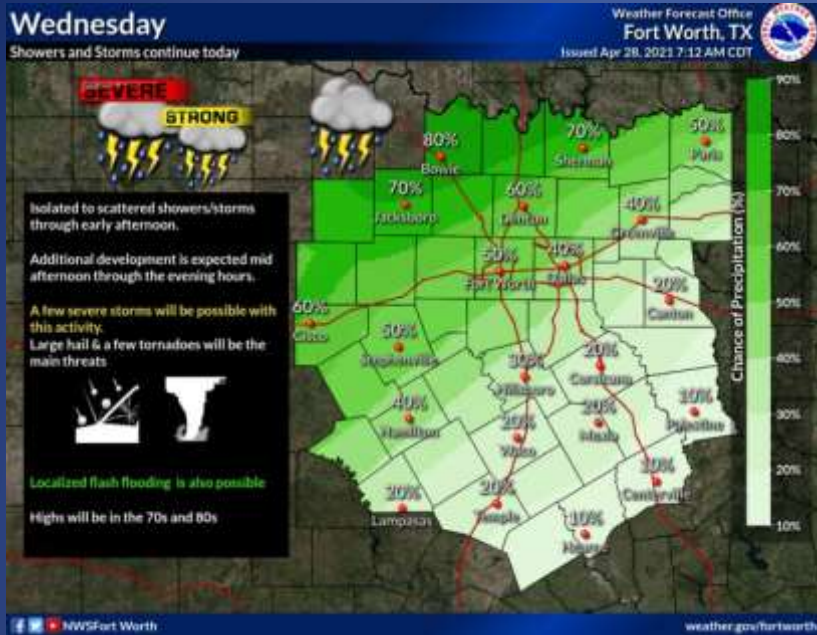

After morning showers and storms today, additional strong to severe storms will be possible by late afternoon across portions of western Oklahoma and western north Texas. They will then spread northeast through the evening hours into central and eventually northern Oklahoma.

A TORNADO WATCH is in effect until 10 AM for the shaded areas. Conditions are favorable for tornadoes and severe storms in the watch area. Pay close attention to the weather!

Hazardous Weather

Isolated to scattered showers and storms will continue through early afternoon. Another round of storms is possible mid to late afternoon and evening. Highest chances for showers and storms will continue to be in Western North Texas. These storms would be capable of producing severe hail and a few tornadoes. Otherwise, expect cloudy skies and highs in the 70s and 80s.

There is a chance for some strong to severe thunderstorms this evening into tonight across mainly portions of southeast Oklahoma.

Hazardous Weather

Severe thunderstorms will be possible across much West Central Texas today into tonight. Hazards include large hail, damaging winds and isolated tornadoes.

A few isolated showers are possible this morning with perhaps a rumble of thunder, but the main show comes late this afternoon west of the black outline when strong to severe thunderstorms develop. See the Severe and Heavy Rain risk tabs for more details.

Hazardous Weather

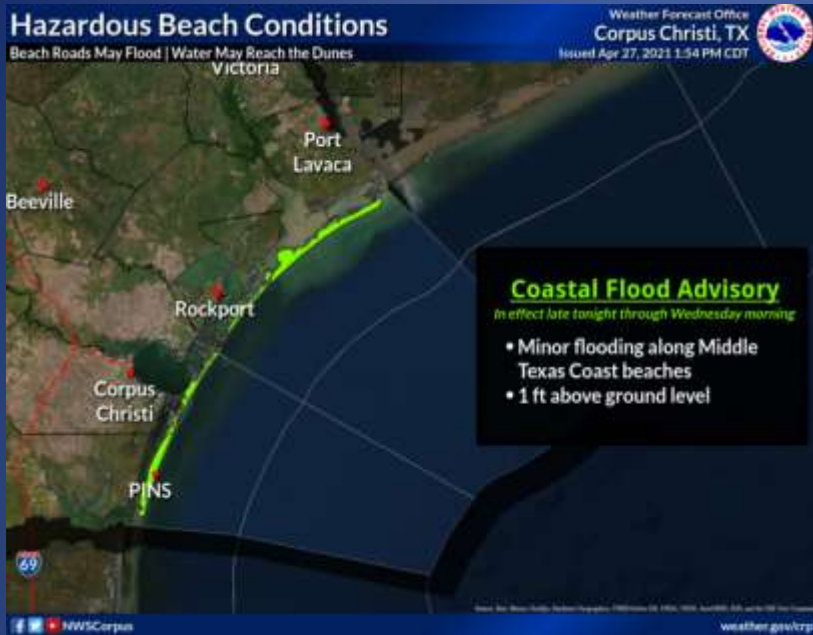

Numerous showers and storms are forecast to develop from west to east late Wednesday afternoon through early Thursday morning. The primary threat is large hail, potentially 2 inches or greater in diameter in the red outlined area, and isolated tornadoes are also possible mainly west of a Kerrville to Castroville to Carrizo Springs line. Damaging wind gusts are also possible. Storms will weaken as they move through the I-35 corridor early Thursday morning.

There is a Slight Risk of severe thunderstorms later this evening and overnight across the western Brush Country. A few thunderstorms in these areas could produce large hail of 1 to 2 inches in diameter and wind gusts over 60 mph.

Hazardous Weather

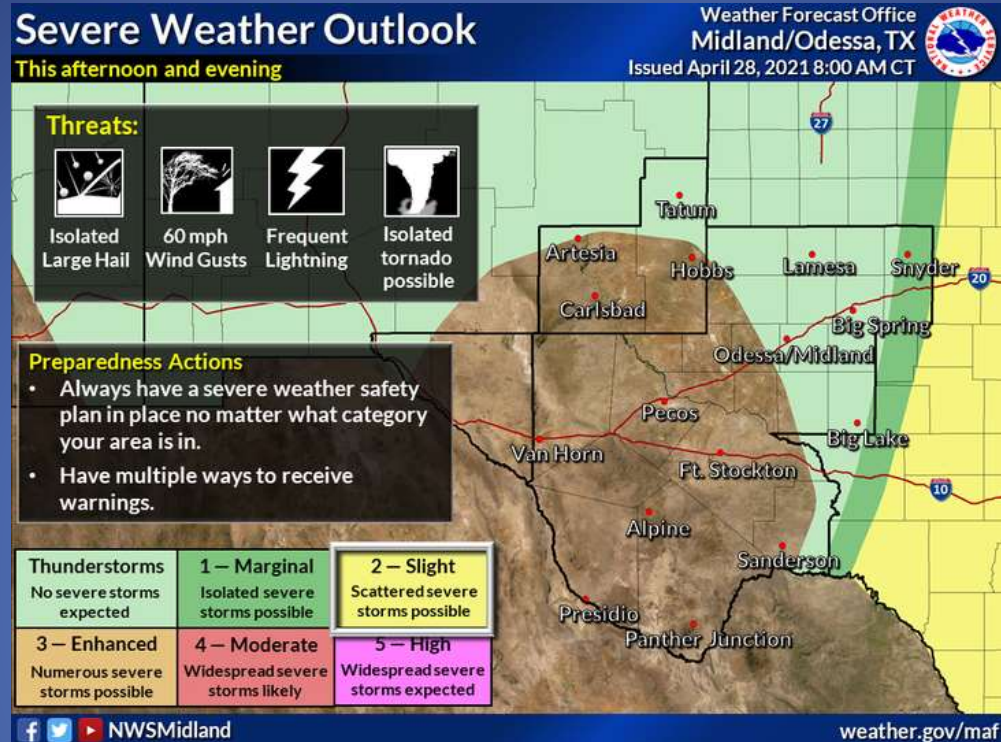

A Coastal Flood Advisory is in effect from 3 AM until 9 AM Wednesday morning. Minor coastal flooding is likely during these times, and water could reach the dunes and make some beach access roads impassable.

A hot and windy day is expected across Deep South Texas with a Wind Advisory in effect across portions of the mid to lower RGV and lower Texas coast. Dangerous surf and marine conditions are expected due to the increased winds, including a high risk of rip currents and Small Craft Advisories.

Hazardous Weather

Isolated large hail and strong winds look to be the main threats today, but an isolated tornado cannot be ruled out.

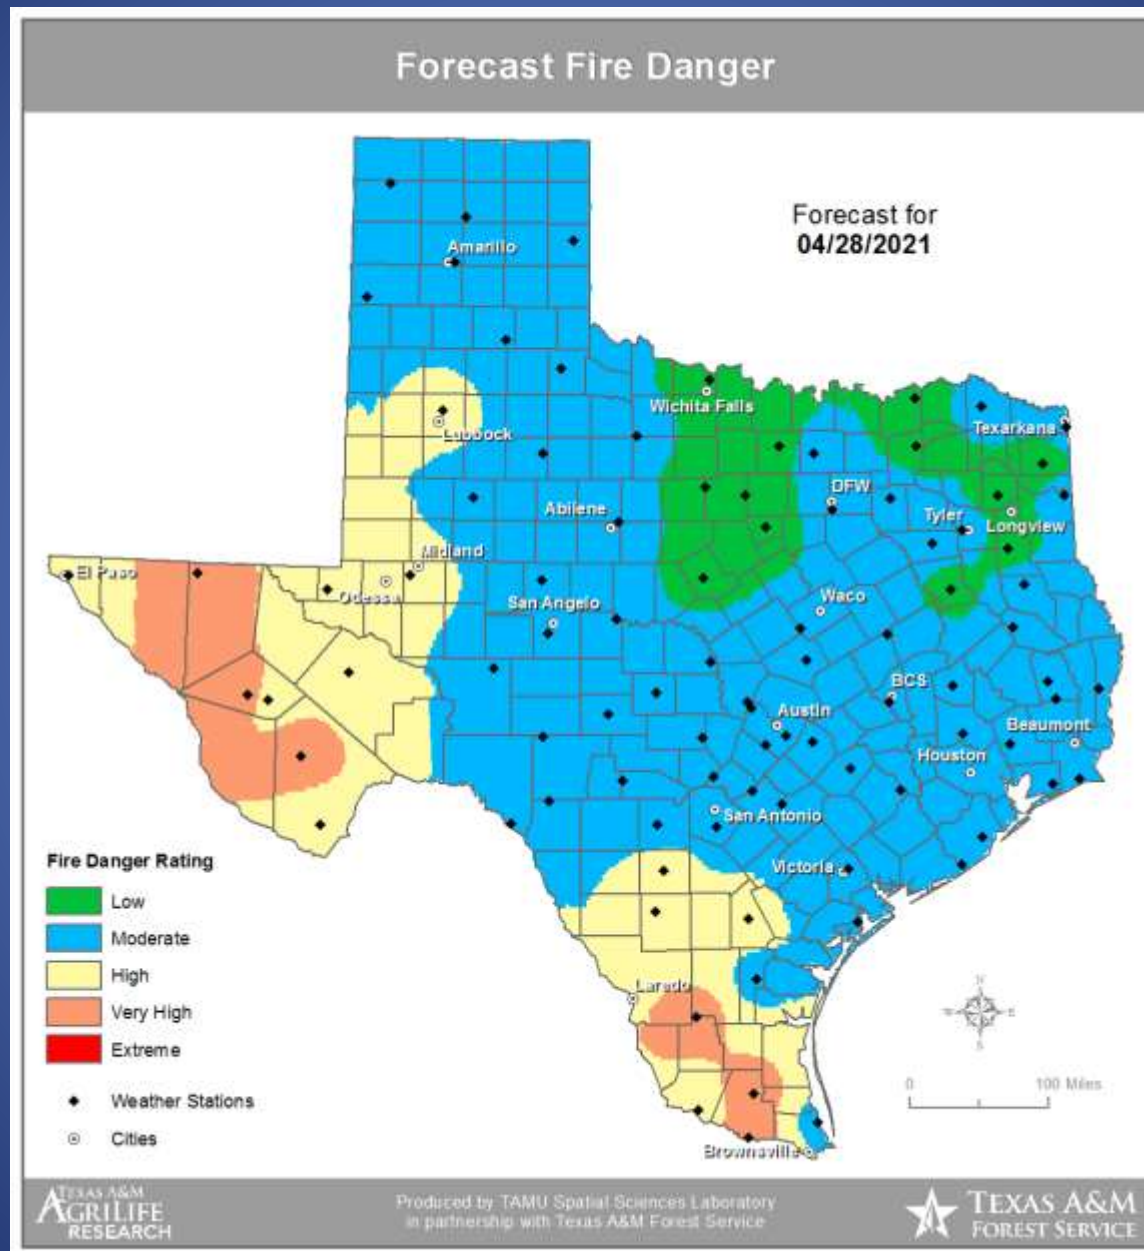

Weather Warnings/Advisories Issued

DATE	WARNING TYPE	LOCATION
04/27/21	High Wind Warning	Guadalupe and Delaware Mountains affecting Culberson County
